
AMDMSR Tweaker V1.1 64 Bit

July 13, 2016 - For some reason, every multi-core frequency monitoring software (HWiNFO64, Core Temp and AMD Overdrive, both latest versions) shows all ... cores that are not actually being used CPU. I am running an x64 version of Ubuntu and in fact I have three cores that are never really used, all three of them are not used when running x86_64. Each of them uses a total of about 0.8% of the CPU. At 95% CPU usage (in the x64 version) I only get 2.9% CPU usage, and at 100% CPU usage (in the x86 version) I only get 0.7% CPU usage. I really need to figure this out!
