AutoCAD Crack +

AutoCAD History AutoCAD History The AutoCAD software was originally called AUTOCAD, and it used a proprietary raster image processing (RIP) file format. All features except for non-binary commands were supported. It was developed by Pratt & Whitney Division of United Technologies Corporation (UTC) (and later by Autodesk) during 1982-1987. The first version of the product was released in December 1982, named AUTOCAD 1.0, which was a 32-bit application that supported only the 2D graphics standard. The original version of the software was released for the PC in 1985 and for the Macintosh in 1988. The software was originally released for the Macintosh in 1988 as part of the "CAD Construction" version, later renamed "AutoCAD" in the 1989 release. This was the first version of the software that could open and save drawings in the same file format, but because this version was not published as part of the Macintosh bundle, it was not adopted for the Macintosh. The product name of the application was changed to AutoCAD (not AUTOCAD) in the 1991 release. The first official release of the AutoCAD for Mac was the March 1991 release. The software for the Macintosh and the DOS version were compatible with each other at this time, as well as the original product. The first official release of AutoCAD for Windows was on October 16, 1994, and the first release of AutoCAD for the Macintosh was on March 15, 1995. The first official release of AutoCAD for Windows NT was on May 5, 1995, and the first release of AutoCAD for the Macintosh was on June 11, 1995. The first official release of AutoCAD for the Internet was on December 16, 1995. It was a web-based version that was used to connect to the company's CAD database. The product name of the application was changed to AutoCAD in the 1991 release. The first official release of AutoCAD for
