They can be sent across the network and to other devices, and dragged or dropped. The use of the command line is primarily for operators and advanced users. The Electronic Data Interchange (EDI) standard provides interoperability between various CAD software systems. AutoCAD can exchange drawing files with other applications. AutoCAD can also interact with the Outside In® technology. ABI AutoCAD includes connectivity features for setting up and connecting to networked computers, including the ability to create a new drawing, open a network connection from the command line, open another drawing, load a file into the current drawing or file, save files, send files, synchronize the drawing data with a drawing on another computer, and load a database. Two different types of connections are supported, including the AutoCAD EDI interface for interoperability with other CAD systems and the direct CAD interface for communicating with other CAD systems, when there is no EDI interface.
